## PROFESSIONAL SUMMARY

Frontend Engineer with 4+ years of **experience building scalable, high-performance web applications** in the Banking and Financial markets domain. Currently at **EquiLend**, driving frontend architecture and **delivering complex, real-time systems in securities finance**. Deep expertise in **React.js, TypeScript, Redux, Angular, and WebSockets**, with a strong focus on **microfrontend architecture, performance engineering, and scalable UI systems**. Proficient in leveraging AI-assisted development tools to accelerate delivery and code quality.

**CORE EXPERTISE:** Frontend Architecture • Microfrontends • Real-time Systems • Performance Engineering • Design Systems • AI-Augmented Development

## SKILLS & TECHNOLOGIES

- **FRONTEND ENGINEERING & ARCHITECTURE:** React, TypeScript, Next.js, Microfrontends, Design Systems, Component Architecture, Module Federation, Progressive Web Apps, Accessibility (a11y), Authentication flows (OAuth, JWT, SSO)
- **PERFORMANCE & SYSTEMS:** Core Web Vitals, Rendering Optimization, Code Splitting, WebSockets real-time systems, Lighthouse optimization, Service Workers & caching strategies
- **STATE & DATA LAYER:** Redux, Redux-toolkit, TanStack Query (React Query), Server State, API Caching, Apollo Client (GraphQL)
- **TESTING & CODE QUALITY:** Jest, Cypress, React Testing Library, Visual regression testing (Chromatic, Percy)
- **AI & DEVELOPER PRODUCTIVITY:** Cursor, GitHub Copilot, Claude Code, Codex
- **TOOLING:** npm/yarn/pnpm, Webpack, Git, AWS (S3, CloudFront, Lambda, EC2), NGINX, ESLint, Husky

## EDUCATION

**National Institute of Technology Agartala** || Agartala, IN — August 2017 – May 2021
*B.Tech, Electronics and Communication Engineering*

## WORK EXPERIENCE

**EQUILEND** : *Senior Software Development Engineer* — 07/2025 – present

- Architected **scalable frontend systems for real-time securities finance platforms** using React, TypeScript, and microfrontend architecture, enabling modular, independently deployable applications.
- Delivered high-impact features end-to-end, **optimizing performance through advanced rendering strategies, code splitting, and Core Web Vitals improvements**, while ensuring low-latency updates via WebSockets.
- **Designed and maintained reusable component libraries and design systems**, driving UI consistency, improving developer experience, and accelerating cross-team delivery.
- Engineered robust state management and **real-time data handling strategies, ensuring consistency, fault tolerance**, and efficient processing of **high-volume trading data.**
- Led adoption of agentic AI workflows across teams, boosting engineering velocity and code quality via **context-aware code generation, debugging, and automated test creation**.

**COMVIVA** : *Senior Engineer* 11/2023 – 06/2025

- Built scalable fintech UIs for critical modules including bank transfers, currency conversion, bulk payouts, and pooled account systems with **RBAC**.
- Integrated REST and GraphQL APIs with **caching (25% faster responses),** optimized client-side performance and state management, and increased **test coverage to 95%** using React Testing Library.

**COMVIVA** : *Product Development Engineer* 07/2021 – 11/2023

- Developed and maintained reusable UI components using React, TypeScript, and modern JavaScript (ES6+), optimizing **Redux-based state management** and reducing development effort by 35% while minimizing redundant API calls by 30%.
- Engineered efficient API integration and data handling strategies, **improving response times by 20%,** and contributed to application stability and scalability through build optimization and **deployment using Jenkins and Nginx.**

## PROJECTS

**Selected Engineering Work:**

- **CheersPass - Event Ticketing Platform:** Designed a scalable frontend architecture for a ticketing system using React and Redux, optimizing state management and client-side persistence (local storage) to ensure seamless booking flows, fast load times, and responsive user experience under high interaction scenarios. Visit
- **Billxo - Invoicing platform (PWA):** Architected a progressive web application for invoice management using React and Redux, enabling offline-first capabilities, efficient state handling, and reliable data persistence, with a focus on performance, usability, and real-time user interactions. Visit
- **Bodivue - Health & Nutrition Platform:** Engineered a responsive frontend system using React and Tailwind CSS, integrating data visualization for fitness and nutrition tracking, with optimized rendering and component design for smooth user interactions and scalable UI growth. Visit

**Freelance Work:**

- **Platform for LOGY.AI:** Developed complete frontend architecture for an AI-based health screening platform using React, TypeScript, and AWS. Visit

## CERTIFICATIONS

- **Frontend Development Libraries Certification** — freeCodeCamp

## ENGINEERING EXPERTISE & IMPACT

- **Frontend Architecture & Platform Thinking:** Experienced in designing scalable frontend ecosystems with microfrontends, design systems, and component-driven architecture, focusing on long-term maintainability, developer experience, and independent team scalability.
- **Performance & Scalability Engineering:** Strong focus on Core Web Vitals, rendering optimization, efficient state/data flow, and handling high-frequency real-time data for complex, data-intensive applications.
- **AI-Augmented Development & Product Integration:** Leverage tools like Cursor, GitHub Copilot, and Claude Code for faster development, while building AI-powered features (LLM integrations, intelligent UI workflows) into modern web applications.
- **Advanced Data Layer & Frontend Systems:** Expertise in client-side data orchestration, caching strategies, API design alignment, and managing complex asynchronous flows in large-scale applications.
- **Engineering Excellence & Ownership:** Strong emphasis on code quality, testing strategy, and system reliability, with a track record of owning critical features in production-grade, high-impact environments.
